“DISASTER VICTIM IDENTIFICATION – IN THEORY AND PRACTICE”

Sat 6th May 2017 – Tallaght hospital, Dublin – Practical Training Day

Irish Forensic Radiography Response Team (IrIFRRT) Training

The aim of today is provide all delegates with the opportunity to apply the principles learned in theory to a mock deployment scenario. Each workshop is 40 minutes long and this will give each group member time for some practical experience. Assessment will be ongoing throughout the day.

PROGRAMME

Station 1 (40 minutes)

Forensic Fluoroscopy Techniques

Radiographers will have the opportunity to practise screening a simulated body bag and locate artefacts interest under fluoroscopic control. This also involves the documentation of the screening process using the appropriate IAFR and Interpol forms

Station 2 (40 minutes)

Dental Radiography Techniques

Radiographers will have the opportunity to observe use of portable dental x-ray equipment and practice dental radiography techniques.

Station 3 (40 minutes)

Forensic Radiography Techniques

Radiographers will have an opportunity the use a mobile x-ray machine that could be used on deployment, as well as documenting the radiography process using the appropriate IAFR and Interpol forms.

Station 4 (40 minutes)

AM v's PM Dental Image Comparison

An opportunity to gain experience from an experienced Forensic Dentist in comparison techniques between ante-mortem and post-mortem data so the forensic radiographer appreciates what they are trying to achieve when replicating AM dental imaging.

Station 5 (40 minutes)

Pattern Recognition and Practical Problems

An image viewing revision session on forensic image interpretation and advice on planning for their first deployment as a forensic radiographer.

Station 6 (40 minutes)

PMCT

An introduction to PMCT scanning performed for DVI purposes, including scan protocols and using the appropriate IAFR and Interpol forms.
