

International Association of Forensic Radiographers

Webinar #7

Wed 23 Jan 2019

18.00 [GMT]

An Introduction to Forensic Archaeology

Mr Roland Wessling, Lecturer, Cranfield University; Co-director of CRICC team (Cranfield Recovery & Identification of Conflict Casualties)

Forensic archaeologists try to help enforcement agencies to find and recover buried human remains and other evidence and to interpret the burial context to reconstruct past events. At the same time, forensic archaeological recovery techniques can also be employed to find missing casualties and together with anthropology, radiography, pathology and DNA analysis attempt to identify the individual and reunite the missing person with his or her loved ones.
